Summary

AI engineer shipping agentic products across US and Singapore remote teams. At Rowboat Labs (YC S24), shipped Skills support, ChatGPT OAuth and a redesigned model-selection flow to production. Solo-built Carrerlift (**30,000+ organic users**) and built multi-agent browser automation at UW's RAIVN Lab. Strongest in Python, TypeScript, agent workflows and product integrations.

Experience

Research Intern **Jul 2026 – Present**
RAIVN Lab, University of Washington *Seattle, WA (Remote)*

- Built a multi-agent browser-automation system where vision-language agents (MolmoWeb, Qwen-VL) drive real browsers from screenshots alone, behind a model-agnostic adapter layer.
- Implemented parallel orchestration in Python (Playwright, asyncio) with isolated browser contexts, best-of-N rollouts judged by an LLM and manager–worker replanning; **2.71**× speedup on live runs, covered by 170 tests.

Agentic AI Engineer Intern **May 2026 – Aug 2026**
Rowboat Labs (YC S24) *San Francisco (Remote)*

- Implemented **Skills** support in Rowboat, an open-source AI coworker platform (15k+ GitHub stars): agents load packaged instruction sets and tools on demand, so capabilities ship as installable packages.
- Shipped **ChatGPT OAuth** (OAuth 2.0 + PKCE) so users run agents on an existing ChatGPT/Codex subscription instead of separate API keys, and rebuilt provider/model selection around one shared **ModelSelector** used on **9 surfaces** with bring-your-own-key support; merged **30+ PRs** reviewed by both co-founders.

Product Engineer Intern (Founding Team) **Dec 2025 – Mar 2026**
ThinkSpace AI *Singapore (Remote)*

- Built an Electron research assistant with sentence-window RAG and page-anchored citations across PDF/DOCX, Google Drive and live web; validated by a legal QA team on a ∼100-question gold standard.

AI Engineer Intern **Sep 2025 – Dec 2025**
Compeers AI *United States (Remote)*

- Shipped two market-research tools for a B2B intelligence platform: a 4-stage SEC EDGAR → Google Trends → SWOT pipeline, and a Reddit audience profiler (PRAW, VADER).

Projects

Carrerlift – AI Career Platform | *Next.js, Supabase, LLM Agents, Vector Search* Live

- Solo-built and scaled an AI career platform to **30,000+ organic users** with zero paid acquisition; **100+ paid users** within 15 days of launching premium.
- Built the matching backend (resume parsing → embeddings → vector search → LLM re-ranking over live job listings and 1,500+ research positions) and an automated pipeline refreshing **3,500+** openings every 12–24 hours with personalized email alerts, running unattended at near-zero infra cost.

GRPO Post-Training for Web Grounding | *Qwen2.5-VL-3B, TRL, Unsloth, LoRA* Code | Weights

- Post-trained Qwen2.5-VL-3B with SFT → **GRPO** on a verifiable click reward, raising ScreenSpot-Web click accuracy **71.6%** → **81.8%** (icons 59% → 84%) in ∼2 A100-hours.

Drona AI – AI Mock-Interview Platform | *Next.js, TypeScript, Vercel, OpenRouter, Redis* Live

- Launched an adaptive mock-interview product (**1,000+ organic users**) generating questions from uploaded PDFs; re-architected Streamlit → serverless Next.js, cutting a ∼500 MB vector stack to **zero infra cost**.

Research

Navigating Epistemic Parity in LLM Agents – memory vs. skill conflict benchmark arXiv | Code
Sole author · ***Accepted, NeurIPS 2026 Workshop "Who Verifies the Agents?"*** · Dec 2026 · arXiv:2610.33128

- 52-scenario benchmark, **1,383 deterministically-graded runs** across 3 models on memory-vs-skill conflicts.

Education

Indian Institute of Technology Guwahati **Guwahati, India**
B.S. (Honors) in Data Science and Artificial Intelligence *Expected Aug 2027*

Technical Skills

Languages & CS: Python, TypeScript, JavaScript, Java, SQL; System Design (HLD/LLD), DSA (1000+ LeetCode)
AI & Agents: Multi-agent orchestration, tool calling, MCP, LangGraph/LangChain, RAG, LLM evals, vision-language agents, LLM APIs (OpenAI, Anthropic, OpenRouter); PyTorch, HF Transformers, TRL, Unsloth, PEFT/LoRA, post-training (SFT, GRPO)
Engineering: FastAPI, Node.js, Next.js/React, Electron, OAuth 2.0 (PKCE), Playwright, PostgreSQL/Supabase, Redis, Docker, Vercel
