Summary

AI engineer with experience shipping agentic products across US and Singapore remote teams. Contributed **30+ merged PRs** at Rowboat Labs (YC S24), including Skills support and ChatGPT OAuth. Solo-built CareerLift and developed multi-agent browser automation systems at UW's RAIVN Lab. Strongest in Python, TypeScript, agent workflows, and product integrations.

Experience

Research Intern **Jul 2026 – Present**
RAIVN Lab, University of Washington *Seattle, WA (Remote)*

- Built a multi-agent browser-automation system where vision-language agents (MolmoWeb, Qwen-VL) operate real browsers from screenshots alone, behind a model-agnostic adapter layer so new models plug in without touching the agent loop.
- Implemented parallel orchestration with isolated browser contexts, best-of-N rollouts judged by an LLM, and manager–worker task decomposition with replanning; reached **2.71**× speedup on live runs.

Agentic AI Engineer Intern **May 2026 – Aug 2026**
Rowboat Labs (YC S24) *San Francisco (Remote)*

- Implemented **Skills** support in Rowboat, an open-source AI coworker platform (15k+ GitHub stars): agents load packaged instruction sets and tools on demand, so new capabilities ship as installable packages instead of core-code changes.
- Shipped **ChatGPT OAuth** (OAuth 2.0 + PKCE) so users can run agents on an existing Codex subscription instead of separate API keys; merged **30+ PRs** into a TypeScript-first production codebase with both co-founders reviewing.

Product Engineer Intern (Founding Team) **Dec 2025 – Mar 2026**
ThinkSpace AI *Singapore (Remote)*

- Built an Electron research-assistant product that answers across PDF/DOCX, Google Drive and live web with page-anchored citations; evaluated for factual and citation accuracy by a legal QA team on a ∼100-question gold standard.

AI Engineer Intern **Sep 2025 – Dec 2025**
Compeers AI *United States (Remote)*

- Shipped two market-research tools for a B2B platform: an SEC EDGAR + Google Trends SWOT pipeline and a Reddit profiler.

Selected Projects

CareerLift – AI Career Platform | *Next.js, Supabase, LLM Agents, Vector Search* Live

- Solo-built and scaled an AI career platform to **25,000+ organic users** with zero paid acquisition and **100+ paid users** within 15 days of launching premium; resume parsing → embeddings → vector search → LLM re-ranking against live jobs and 1,500+ research positions, with skill-gap analysis.
- Automated a jobs pipeline that refreshes **3,500+** openings across India, US and EU every 12–24 hours and sends personalized email alerts, running unattended at near-zero infra cost.

GRPO Post-Training for Web Grounding | *Qwen2.5-VL-3B, TRL, Unsloth, LoRA* Code | Weights

- Post-trained Qwen2.5-VL-3B with SFT → GRPO on a verifiable click reward, raising ScreenSpot-Web click accuracy **71.6%** → **81.8%** (icons 59% → 84%); open-sourced adapters and eval harness.

Drona AI – AI Mock-Interview Platform | *Next.js, TypeScript, Vercel, OpenRouter, Redis* Live

- Launched an adaptive mock-interview product (**1,000+ organic users**) that generates role-specific questions from uploaded PDFs; re-architected from Streamlit to serverless Next.js, cutting a ∼500 MB vector stack to **zero infra cost**.

Research

Navigating Epistemic Parity in LLM Agents – memory vs. skill conflict benchmark Paper | Code

Sole author · ***Accepted, NeurIPS 2026 Workshop "Who Verifies the Agents?"*** · *Dec 2026*

- Built a 52-scenario benchmark and eval harness; ran **1,383 deterministically-graded runs** (3 models × 3 context conditions) measuring how agents resolve contradictions between injected memory and `SKILL.md` files. Found no default precedence and no accompanying text in **98.8%** of tool-call runs.
- Showed that a single generic "skill takes precedence" instruction flipped one model from refusing forbidden irreversible actions to performing them (**28%** → **90%** on permission conflicts).

Education

Indian Institute of Technology Guwahati **Guwahati, India**
B.S. (Honors) in Data Science and Artificial Intelligence *Expected Aug 2027*

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, SQL
Agents & LLMs: Multi-agent orchestration, tool calling, MCP, LangGraph/LangChain, CrewAI, RAG, LLM evaluation, vision-language agents, LLM APIs (OpenAI, Anthropic, OpenRouter)
ML: PyTorch, Hugging Face Transformers, TRL, Unsloth, PEFT/LoRA, post-training (SFT, GRPO), Scikit-learn
Engineering: FastAPI, Node.js, Next.js/React, Electron, OAuth 2.0 (PKCE), WebSockets, asyncio, Playwright, PostgreSQL/Supabase, Redis, Docker, Vercel; System Design (HLD/LLD)
